

MOMOH SANI MUSA

Senior Infrastructure / Platform Engineer | DevOps | Site Reliability

Lagos, Nigeria • +234 803 320-5283 • sanim16@yahoo.com • linkedin.com/in/momohsanimusa

SUMMARY

Senior DevOps/Site Reliability Engineer with 8 years of experience building and operating reliable cloud platforms on AWS. Experienced with production Kubernetes/EKS, Terraform, GitOps, CI/CD, autoscaling, observability, AWS database services, and developer tooling. Focused on making infrastructure reliable, easy for engineers to use, and cost-efficient, with a track record of reducing cloud costs, improving deployment reliability, and eliminating operational toil.

CORE SKILLS

Cloud	AWS, GCP
Kubernetes	EKS, Helm, Karpenter, Docker
IaC	Terraform, AWS CDK
GitOps	ArgoCD
CI/CD	GitHub Actions, GitLab CI/CD, Jenkins, Drone CI
Observability	Prometheus, Grafana, Datadog, Sentry, CloudWatch
Automation	Python, Bash, Ansible
Platform	Linux, IAM, Multi-account AWS, AWS Control Tower, Account Factory for Terraform (AFT)
Databases	RDS, Aurora, PostgreSQL, MySQL, Redis, MongoDB

PROFESSIONAL EXPERIENCE

Senior DevOps Engineer (Site Reliability Engineering) — Metro Africa Xpress Inc (MAX), Nigeria | 11/2024 – Present

- Lead DevOps/Infrastructure engineering, partnering with application teams and senior engineering leadership on platform reliability, architecture, standards, and roadmap decisions.
- Design and operate AWS infrastructure with Terraform across multi-account environments, using reusable patterns to provide consistent, repeatable infrastructure.
- Operate production Kubernetes on Amazon EKS using Helm and ArgoCD/GitOps, improving deployment consistency, reliability, and platform self-service.
- Introduced and tuned Karpenter autoscaling, reducing Kubernetes compute costs by approximately 20% while maintaining workload performance.
- Standardized GitHub Actions workflows and infrastructure delivery with Terraform and ArgoCD, contributing to a 30% improvement in deployment success rates.
- Manage AWS database infrastructure including RDS and Aurora, covering provisioning, configuration, monitoring, backups, performance considerations, and database migrations.
- Built and improved production observability using Prometheus, Grafana, CloudWatch, and Sentry; self-hosted Sentry at MAX to improve application error visibility and incident investigation.
- Led AWS cost-optimization initiatives, reducing overall AWS spend by approximately 35% through rightsizing, autoscaling, and infrastructure optimization.
- Used AI-assisted troubleshooting across AWS/EKS, including Kubernetes Gateway configuration, CI/CD failures, dependency conflicts, and security hardening, accelerating investigation and implementation while keeping production decisions human-reviewed.
- Authored operational runbooks and troubleshooting documentation and mentored engineers to improve incident response consistency, knowledge sharing, and onboarding.
- Collaborated with security teams on IAM, secrets management, least-privilege access, and infrastructure security hardening.

Senior Site Reliability Engineer — Heetch, France | 02/2023 – 05/2024

- Automated AWS cloud infrastructure provisioning with Terraform, reducing manual operational work by approximately 50%.
- Operated and scaled production Kubernetes platforms with a focus on availability, reliability, and operational simplicity.
- Successfully migrated the CI platform from Drone CI to GitHub Actions, improving standardization and integration with the wider engineering workflow.
- Built reusable Terraform modules and GitHub Actions workflows that enabled engineering teams to provision infrastructure and deploy services with less operational overhead.
- Developed Python and Bash automation that reduced deployment time by approximately 50% and improved consistency.
- Participated in production on-call rotation, led incident investigations and recovery efforts, and drove post-incident improvements to reduce recurring issues.
- Standardized AWS infrastructure patterns and Terraform modules across engineering teams.

DevOps Engineer — SDI Enterprises, Nigeria | 08/2021 – 01/2023

- Deployed and maintained AWS infrastructure using Terraform and drove adoption of Kubernetes for containerized workloads.
- Worked with AWS Control Tower and Account Factory for Terraform (AFT) to support standardized multi-account AWS provisioning and governance.

- Implemented GitLab CI/CD workflows to automate build, test, and deployment processes.
- Designed CI/CD pipelines that reduced deployment time by 30% and increased release frequency by 20%.
- Improved build, test, and deployment automation in partnership with development teams.

DevOps Engineer — Darafex and Digital Services, Nigeria | 02/2019 – 07/2021

- Managed AWS environments and implemented Terraform-based infrastructure automation to standardize deployments and reduce manual error.
- Automated monitoring and scaling with AWS CloudWatch, improving service stability and reducing downtime.

Earlier Career — Relationship Manager, Guaranty Trust Bank, Nigeria | 09/2007 – 01/2019

Managed customer relationships and led teams in Lokoja and Okene, building more than five years of people-management and leadership experience.

EDUCATION & CERTIFICATION

B.Sc. Systems Engineering — University of Lagos, Nigeria | 2000–2004

AWS Certified SysOps Administrator – Associate | March 2025
